# ESTIMATION & COST EVALUATION-II

STRICTLY ACCORDING SCTE&VT SYLLABUS  
5TH SEMESTER CIVIL ENGINEERING

DEPARTMENT OF CIVIL ENGINEERING  
PREPARED BY: SATYANARAYAN BHUSAGAR

## **SCTE&VT SYLLABUS 2021-2022**

<b>SL NO</b>	<b>TOPICS</b>
<b>01</b>	<b>Detailed estimate of culverts and bridges</b>
<b>02</b>	<b>Estimate of irrigation structures</b>
<b>03</b>	<b>Detailed estimate of roads</b>
<b>04</b>	<b>Detailed estimates of miscellaneous works</b>
<b>05</b>	<b>PWD accounts works</b>

## BRIDGES AND CULVERTS

### Culverts and Bridge :-

According to I.R.C. Specification, a culvert is one which has a linear waterway upto 6m and structures having a linear waterway above 6m but below 30m as minor bridges and structures having a linear waterway of 30m or more as Major Bridges.

As a general rule, a minimum of 6m of linear waterway should be provided per 1.5 km. of the road for efficient drainage.

### Abutment Wall :-

It is a masonry or reinforced concrete wall that constitutes the end support of bridge or similar structures by which its ~~joins~~ joins the banks of water ways.

Wing Wall :-

Wing wall is a retaining wall which sustains the embankments of the approaches where they join the bridge.

Return Wall :-

A return wall is a retaining wall built parallel to the centre line of a road to retain the embankment.

Curtain Wall :-

Cross wall are built across the stream, on the up-stream or down stream in order to protect the structure from erosion due to strong current of water induced by the restriction of free passage of water through the waterway.

FIG. 8.15

All dimensions are in Centimetre. Scale 1 : 75

Q. Prepare a quantity survey for a slab culvert of 1.5m clear span and 4m Road way as shown in figure.

The general specification are as follows:-

Foundation shall be of cement concrete 1:2:4, Brickwork shall be of 1st class in cement mortar 1:4, Exposed surfaces of brick masonry shall be cement pointed 1:3 carried upto 15cm below G.L, The exposed surface of R.C.C. slab shall be given a smooth finish during centering and no plastering should be allowed. The string courses shall be 8cm deep and 12mm thick with cement mortar 1:3 finished with neat cement. (Weight of 16mm and 10mm dia. bars 1.58kg and 0.58kg respectively per 8m).

Item No.	Description	No.	Length (cm)	Breadth (cm)	Height (cm)	Quantity	Remark

Q. Figure shows the plan, elevation and sections of a pipe culvert. Prepare the detailed estimate of the pipe culvert with the following general specification:-

Foundation concrete - 1:4:8 cement concrete with 40 mm stone ballast.

Kume pipe - 70 cm external diameter.

Brickwork in face wall, wing walls and parapet walls - 1st class brickwork in 1:4 cement sand mortar.

Upstream and Downstream pitching - 10 cm thick pitching in 1:4 cement sand mortar.

Finishing - 1:2 cement pointing on all exposed surfaces of masonry.

**R C C slab size**

- 1:4:8 C.C. in foundation

Q. Figure showing the plan, foundation plan, sectional elevation and other detailed drawing of a slab culvert.

Prepare the detailed estimate of the culvert with the following general specification:

Foundation concrete - 1:4:8 cement concrete with 40mm stone ballast;

Masonry work in parapet, abutment and wing wall - 1st. class brick work in 1:4 cement and mortar.

Bed pitching - 10cm thick brick pitching in 1:4 cement sand mortar.

Slab work - 1:2:4 R.C.C. Work.

Finishing - 1:2 cement sand struck pointing on all exposed masonry surfaces.

Adopt suitable rate.

## Estimate of Irrigation Structures estimate of a 1 metre fall:-

Prepare a detailed estimate of a 1m fall for a branch canal having 1.65m bed width 76cm depth of water, from the general specifications are

(1) Foundation of abutment, wing & drop walls and flooring shall be cement concrete (1:4:8)

(2) wearing coat, floor bed w/s wing walls, friction block, staggered blocks and crest shall be cement concrete (1:2:4)

(3) All brickwork shall be 3rd class w/ cement mortar (1:4)

(4) All exposed surface of brickwork shall be made flush pointed on cement mortar (1:3). Assume suitable rates.

Item No	Description	No.	L (m)	B (m)	H (m)	Q	Total	Explanatory notes

# Road Estimating

## Earthwork

Cross-section of earthwork of road in banking or in cutting is usually in the form of trapezium and the quantity of earthwork may be calculated by the following methods.

Quantity or volume = sectional area  $\times$  Length.

Sectional area = Area of central rectangular portion  
+ Area of two side triangular portions.

$$= Bd + 2 \left( \frac{1}{2} sd \times d \right) = Bd + sd^2$$

$s:1$  is the ratio of side slopes as horizontal:vertical  
for 1 vertical horizontal is  $s$ , for  $d$  vertical, horizontal is  $sd$ .

$$\text{Quantity} = (Bd + sd^2) L$$

## Lead and Lift

Normally earthwork is estimated for 30m lead for distance and 1.5m lift for height or depth and this distance of 30m and the height of 1.5m are known as normal lead and lift. Normal rate for earthwork is for 30m lead and 1.5m lift. For greater lead or lift the rates will be different for every unit of 30m lead and for every unit of 1.5m lift. The earthwork is therefore estimated separately for every 30m lead and for every 1.5m lift.

## Problem

- 1) Calculate the quantity of earthwork for 200m length for a portion of a road in an uniform ground the heights of banks at the two ends being 1m and 1.6m. The formation width is 10mt and side slopes 2:1.

Ans Quantity =  $(Bd + sd^2) \times \text{Length}$

$$B = 10\text{m}, S = 2,$$

$$L = 200\text{m}$$

$$d = \text{mean depth} = \frac{1 + 1.6}{2} = 1.3\text{m}$$

$$\begin{aligned}\text{Quantity} &= (10 \times 1.3 + 2 \times 1.3^2) \times 200 \\ &= 16.38 \times 200 = 3276 \text{ cum}\end{aligned}$$

- 2) i) Calculate the area of side slopes of portion of a bank for a length of 200mt: the heights of banks at the two ends being 2.5m and 3.5m and the ratio of side slopes are 2:1.

- ii) If the side slopes are to be provided with 15cm thick stone pitching, calculate the cost of pitching at the rate of Rs 150/- per cum

Ans i) Mean height  $d = \frac{2.5 + 3.5}{2} = 3\text{m}$

$$\begin{aligned}\text{sloping breadth at the mid-section} &= d\sqrt{S^2 + 1} \\ &= 3\sqrt{(2^2 + 1)} = 6.71\end{aligned}$$

$$\begin{aligned}\text{Area of the two side slopes} &= 2L \times d\sqrt{S^2 + 1} \\ &= 2 \times 200 \times 6.71 = 2684 \text{ sqm}\end{aligned}$$

ii) Quantity of pitching = Area  $\times$  thickness

$$= 2684 \times 0.15 = 402.6 \text{ cum}$$

$$\begin{aligned}\text{Cost of stone pitching} &= 402.6 \times 150 \\ &= \text{Rs } 60390/-\end{aligned}$$

3) Reduced level (R.L) of ground along the centre line of a proposed road from chainage 10 to chainage 20 are given below. The formation level at the 10th chainage is 107 and the road is in downward gradient of 1 in 150 up to the chainage 14 and then the gradient changes to 1 in 100 downward. Formation width of road is 10m and side slopes of banking are 2:1 (Horizontal:vertical). Length of chain is 30m.

Draw longitudinal section of the road and a typical cross-section and prepare an estimate of earthwork at the rate of Rs 275.00/cum.

i) Find also the area of the side slopes and the cost of turfing the side slopes at the rate of Rs 60.00/sq.m.

Chainage	10	11	12	13	14	15	16	17	18	19	20

Particulars & items	Quantity	Unit	Rate	Per % cum	Cost
Earthwork in banking	3513.6	cum	275	% cum	9662.40
Total					9662.40
Add 5% (3% for contingencies and 2% for establishment)					483.12
Grand Total					Rs-10145.52.

### Calculation of areas of side slopes

$$S = 2, \sqrt{S^2 + 1} = 2.236$$

Station or chainage	Height or Depth	Mean	$d\sqrt{S^2+1}$ m	Length L m	Area $2Ld\sqrt{S^2+1}$ m
10 -	2.0	-	-	-	214.80
11 -	1.2	1.60	3.58	30	158.40
12 -	1.16	1.18	2.64	30	111.60
13 -	0.5	0.83	1.86	30	85.80
14 -	0.78	0.64	1.43	30	159.60
15 -	1.60	1.19	2.66	30	147.60
16 -	0.60	1.10	2.46	30	120.60
17 -	1.20	0.90	2.01	30	106.20
18 -	0.38	0.79	1.77	30	72.60
19 -	0.70	0.54	1.21	30	120.60
20 -	1.10	0.90	2.01	30	
Total =					1297.80 cum

Treeing side slopes 1297.80 @ Rs 60.00 per cum  
= Rs 778.68

Add 5% for contingencies etc = Rs 38.93

Grand total = Rs 817.61

4) Estimate the items involved for construction of a WBM road from the following data.

Length of road = 100m

Metalled width = 5500mm

Thickness of the grade-I metal solving = 80mm

Wearing coat of grade-II metal 120mm loose consolidated to 50mm thick. Surface of the road is to be finished with two coats of bitumen as given below.

1st finishing coat: 12mm chips @  $0.018 \text{ m}^3$  and bitumen @ 1.22kg per square meter of the road surface.

2nd finishing coat: 6mm chips @  $0.01 \text{ m}^3$  and bitumen @ 1.22kg per square meter of road surface.

Consumption of fuel @ 0.40 kg per kg of bitumen.

Ans - Length of road = 100m

Metalled width = 5500mm = 5.5m

Area of road surface =  $5.5 \times 100 = 550 \text{ sqm}$

Thickness of grade-I metal solving = 80mm = 0.08m

Quantity required =  $5.5 \times 0.08 \times 100 = 44 \text{ cum}$

Thickness of grade-II metal 120mm loose consolidated to 50mm thick surface of road

Quantity required =  $5.5 \times 0.12 = 66 \text{ cum}$

1st coat of finishing 12mm size chips @  $0.018 \text{ m}^3$  per sqm

for 550 sqm chips required  
=  $550 \times 0.018 = 9.9 \text{ cum}$

Bitumen required =  $550 \times 1.22 \text{ kg}$

= 671 kg of bitumen

2nd coat of bitumen of 6mm size chips @  $0.01 \text{ m}^3$  per  
sqm of road surface quantity required =  $550 \times 0.01 = 5.5 \text{ cum}$

Bitumen required @  $1.22 \text{ kg}$  per  $\text{m}^2$  of road surface

$$= 550 \times 1.22 = 671 \text{ kg bitumen}$$

For 1st coat and 2nd coat bitumen required

$$= 671 + 671 = 1342 \text{ kg}$$

Consumption of bitumen @  $0.42 \text{ kg}$  per kg of bitumen

$$= 1342 \times 0.42 = 564 \text{ kg}$$

Works or jobs can be classified into the following categories:-

- (i) Major & Minor works
- (ii) Petty works
- (iii) Annual Repair.
- (iv) Special Repair
- (v) Quadrantal Repair.

→ Works are also classified according to the funding :-

- (i) Petty works — upto ₹ 50,000/-
- (ii) Minor works — between ₹ 50,000/- to ₹ 2,00,000/-
- (iii) Major works — More than 2 lakhs.

→ Works requires approval from competent authorities. Following are the four main stages which are connected with project work:-

- (i) Administrative Approval
- (ii) Expenditure Sanction
- (iii) Technical Sanction.
- (iv) Appropriation of funds.

\* PETTY WORKS:-

For petty works a requisition is made by the officer for whose convenience of work is required in specified form.

The divisional officer reviews the requisition and provides a rough estimate of the probable cost. For the execution of work the acceptance by a responsible civil officer is mandatory, and in case the civil officer is not satisfied by the proposal then he should refer it with the divisional officer.

## ORIGINAL MINOR AND MAJOR WORKS:-

For civil works to be constructed by the department, it should follow some protocols:-

- (i) The divisional officer is required to connect with all local officer for providing necessary data which enable him to prepare the preliminary estimate and he may deem necessary and submit the same for administrative approval to the authority.
- (ii) On receiving the approval from administration, the divisional officer takes necessary steps for the preparation of a detailed estimate. It requires technical sanctions by the competent authority.
- (iii) After the estimate is technically sanctioned the divisional officer will execute the work following the latest government protocol.

## REPAIR WORKS :-

Repairs are of three kinds:-

- (i) Periodical:- Here the work is carried out with the same quantity from time to time. i.e, white-washing, painting, new coating on metals etc.
- (ii) Annual Repairs:- These repairs are not done according to regulation and the quantity of work may vary. i.e, repair of damaged plaster, door replacement, glass replacement, patch repair on road surface.
- (iii) Occasional or petty Repairs:- This is done from time to time as per the requirement. Works which are carried out under such types are renovation, renewal of structures.

Special Repair:- This is same as the term occasional repair which may become necessary from time to time and which may also be prepared periodic works such as renewal of roof tops, repair of flood damage works are done under this category. For special repair separate requisition should be prepared and get sanctioned.

### Quadrennial Repair:-

Repairs which are performed every 4 months in a year ~~year~~ is called Q.R. This work does not have the same quantity and it is done during the renewal & renovation period.

This type of work requires special permission and requisition from competent authority.

→ Methods of execution of work through the contractors:-

The recognized system for execution of work through contractor is by getting engaged in an agreement or contract.

"Piece-work" is also a mode where an assumed price is agreed upon without the reference to the total quantity of work to be done. "Contract" includes certain rules and binding agreement between the contractor and the client.

"Contract work" is mostly followed by the PWD for all major civil works. The contract is a written document which binds various conditions under the

"Indian Contract Act (1872)"

WORK ORDER:- This method of getting the work done is employed for doing small works upto ₹ 5000/- . This type of contract is done without calling a tender or quote. The work order is done in a prescribed form and condition of the department.

Every department has their own printed work order books which contains the approximate quantities of different items of work, detail specification of work, time of completion of the whole work, penalties which would be imposed for not fulfilling the terms & condition given in the order.

A specimen format is provided below:

Speciman of typical work order is given below :

WORK ORDER No.

SUB-DIVISION

(Book No.)

DIVISION

MEMORANDUM OF AGREEMENT made the ..... day of ..... between ..... son of ..... resident of ..... which expression where the context so admits includes his legal heirs, executors administrators and permitted (assigns) (hereinafter called "the contractor") of the one par and the Governor of Uttar Pradesh (which expressions where the context so admits include his successors and assigns) (hereinafter called "the Governor") of the other part.

WHEREBY THE PARTIES MUTUALLY AGREE WITH EACH OTHER AS FOLLOWS :

1. In consideration of a sum to be calculated at the rates set forth in the Schedule hereto annexed which said sum the Governor hereby agrees to pay to the contractor within-months after the said contractor has completed the works in accordance with the Schedule of works and Special Instruction hereto attached and the Standard Specification

of the Irrigation Department, U.P., the same, to be read part of this agreement, the contractor hereby agrees that all the works shall be executed with great promptness, care and accuracy in a workmanlike manner and shall be completed within months from the date of these presents.

2. The contractor shall use materials of the best quality and shall take articles of Government stock after giving a due receipt and shall use them carefully. In case of nonavailability of any article in Government stock the contractor shall use the material conforming to the Standard Specifications of the Irrigation Department, U.P.
3. If the Governor shall make the solid contract or any payment on account during the execution of the said works he shall be entitled to deduct the same from such sum as is found to be payable to the contractor on completion of the work as aforesaid. From all bills of payment on account a deduction at the rate of 10 percent on their total value will be made, which deductions will be refunded to the contractor in the final payment to be made on the completion of the work as aforesaid.
4. If the ..... shall at any time during the progress of the work be dissatisfied with the rate of progress or the quality of the materials that have been used or of the workmanship be the said may without notice immediately determine this agreement and all in other contractor or employ daily labour to dismantle bad work if necessary and to renew and complete the said works and may pay the cost of such contractor of daily labour for such dismantling, renewing or completion out of such sums as are or would have been payable under this agreement to the contractor or the balance of that sum if payments on account of work done have been made to the contractor and if such cost be more than such sums or the balance of such sum the difference between it and such sum or balance shall be as debt due from the contractor to the Governor and shall be recoverable as such.
5. If the contractor fails to complete as aforesaid the said works by the time fixed in this agreement for completion, the Governor may deduct from the sum found to be payable under this agreement or the balance of the sum then unpaid the sum of Rs for every day that shall elapse between the day fixed for completion and the day of actual completion if action has not been taken under Clause thereof, subject to the maximum penalty of 10 percent of the work order.
6. (1) The contractor will indemnify the Governor from all claims for injury caused to any person whether a workman or not while in or upon the works or the site of the same and the Governor shall not be bound to defend any claim brought under the Workmen's Compensation Act(VIII of 1923) or any of its subsequent amendment unless the contractor makes a written request for the same and first deposits with the Governor a sum which the Governor deems sufficient to meet any liability which the Governor might incur by reason of defending any such claim.  
(2) The Governor shall further be entitled to recover the amount so paid by way of compensation under the aforesaid. Act or any part thereof by deducting the same from the security money deposited by the contractor from any other sum due by him to the contractor under this agreement or on any other account what so ever. Not with standing anything stipulated in the aforesaid clauses the Governor shall have power to retain any sum due to the contractor(s) and set off all claims against him (them) whether arising out of the particular contract or out of any other transactions or contract held by him (their) alone or in partnership with others.  
(3) Every dispute, difference or question which may at any terms during the continuance of this agreement or after its termination from any cause whatsoever arise between the parties hereto any person claiming under them touching or arising out or in respect of the same, or the subject matter thereof shall be referred to the arbitration of the Executive Engineer of the ..... and the decision of the arbitrator shall be final binding on the parties.

IN WITNESS WHERE OF ..... and ..... on behalf of the Governor and acting under his authority in this behalf have signed this deed hereunder on the dates mentioned under their respective signatures.

*Signature of the contractor*

Witness (2)

*Signature of Sub-Divisional Officer on  
behalf of Governor of Uttar Pradesh*

## Types of Contract:-

### (i) Lumpsum Contract:-

In this type of contract, the contractor undertakes the construction work or the execution of the specified work and complete it in all respect for a fixed money.

The design, shape and material are as per the contractor. The detailed specification of the item of work, drawings, plan etc are to be provided by the owner/client.

In case of lumpsum contract the quantities of different items of work are not provided. The contractor shall have to complete the work as per plan and specification within a fixed time.

### (ii) Item rate Contract:-

In this type of contract, the contractor takes work on item rate basis. The payment is done on the basis of quantities of item done and their respective rates.

The approximate quantity of all possible item of work are worked out and are shown in tender form. This

is the most common type of contract system. Here addition and alterations in the detailed plan and specification can be easily made at any stage. This method is the most economical of all also.

### Percentage - Contract :-

In this type of contract, the contractor agrees to take the work of construction for a fixed percentage over the actual cost of construction. This type of contract is given when no contractor is agreeing to do the work due to uncertainties and fluctuation in market rates. The architects and chartered Engg also take work under this method.

The state engineering departments also undertake the work for private persons and usually charge 12-14% for the preparation of estimates, plan and supervision charges.

### \* Labour contract :-

In cases where the owner purchases the material and give the labour work on contract only. This contract engages the labour and gets the work done as per the specification, drawing and instructions of the owner.

After completion of work, a detailed measurement of the items are done and then the payment is made to the contractor. The labour contractor has to use its own tools for working but plants and machines are arranged by the owner.

\* Piece-work agreement:- This is an agreement between the labours and the owner for providing a fixed amount for a type of work done which is not time bound.

\* Scheduled Contracts:- Such contracts are generally time-bound and payment is done only when the work is completed within the time reference.

\* Cost plus fixed percentage contract:-

In this type of contract, the contractor is provided a fixed percentage extra money for providing his services. On completion of the work within the specific time frame, the owner gives the amount and in addition also gives an extra percent amount to the contractor.

## Accounts of works:-

- \* Administrative approval:- When a work order is generated by the divisional officer the content is forwarded to the higher authority. After review the authority provides its consent for proceedings. This is known as administrative approval.
- \* Technical sanction:- It is a consent provided by the technical authority on various technical aspects provided or available in the work order.
- \* Contingency budget:- It is an amount of money which is included to cover potential events that are not specifically accounted for in a cost estimate. It is generally available to compensate the uncertainty inherent expenditures.
- \* Notice Inviting tender:- It is a documented tender which provides information regarding the upcoming project like drawings, specification, expenses, time of completion and other terms and condition.

- \* Quotations:- These are documents which contain the detailed information which is required by the authority for review. It is provided in a format and generally contains information like specifications, expenses, price of products & items.
- \* Earnest Money:- It is the amount which accompanies the tender form while submitting it. It is usually 1% to 2% of the total estimated cost of the work. The main objectives of collecting earnest money with the tender forms are:-
  - (i) Restriction on unnecessary competition.
  - (ii) Punishment
  - (iii) Compensation.
- \* Security deposit:- After calling the tenders, they are scrutinized and the owner's department accepts the reasonable tender usually the lowest. After accepting the tender, the contractor whose tender is accepted is asked to deposit an amount usually 2-10% of the total estimated cost of work as security. This amount is retained by the owner until the work or project is completed.

No ..... of 19

**PIECE-WORK AGREEMENT**

District .....

Division .....

Name of work .....

Name of party tendering .....

I hereby agree to execute the undermentioned description of work by piece work and in accordance with the conditions noted below in considerations payment being made by the Executive Engineer ..... Division for the quantity of work executed at the rates specified in the following schedule.

Sub-divisional officer  
following schedule.

Name of work	Number of Item	Class and description of work to be executed	Unit of calculation	Rate of payment	

### Advance payments:-

Generally advances to contractor is prohibited, but in exceptional cases it is permitted. Sometimes the contractor required some advance on the security of materials brought to the site. In such cases advance upto an amount of 25% of the current value of material is provided under certain conditions.

Intermmidiate payments are provided to the contractor on finished work on approval of competent authority. Such payments are done on exceptional conditions.

Final payments are made on after the handover of the project site. A detailed review and scrutiny is made on the finished work, where the work should comply with the specifications and requirements. On completion of the project and proper scrutiny the amount is released.

A proper running bill, is a documents which is a mode for payment for completing the work. Running bill are passed on the consent of competent authority.

A format of all the above is provided below:-

## Förm 24- First and Final Bill

(For contractors and suppliers- to be used when a single payment is made for a job or contract i.e. only on its completion).

<p>Reviewed</p>	<p>Superintendent Officer</p>

### Work-charged Establishment:-

Payments to work charges establishment is done in the following methods:-

#### Pay bill:-

Wages are drawn and paid on form no. 29, which is a combined pay bill and acquittance roll form.

A consolidated bill in this form is prepared monthly either for the whole division, sub-division or any section.

#### Unpaid Wages:-

Wages remaining unpaid on a passed bill on the date fixed for the closing of the accounts of the month may be paid subsequently when claimed using form 21-B. Subsequent payment should be made on hand receipt.

Travelling Expenses:- All payments of travelling expenses are directly on the hand receipt form No. 28 which should be set forth all the necessary particulars of the journey performed and the expenses claimed.

**FORM 26-Running Accounts Bill**

For Contractors : This form provides for (1) Advance payments, (2) Secured advances, and (3) Payments for measured works.

Cash-book voucher no.

dated

198

**Name of Contractor-**

Name of work-

Serial no. of this Bill-

No. and date of his previous bill for this work-

Figure (D) in words Rupees			Deduct value of works shown on previous bill...						
			Net value of work since previous bill (F)						
			Figure (F) in words Rupees .....						

Where there is an entry in column 9 on basis of actual measurement, the whole of the amount previously paid without a detailed measurement should be adjusted by *Minus* entry in column 2 equivalent to the amount shown in column 1, so that the "Total up to date" in column 3 may become "Nil".

‡ When there are one or more entries in column 9 relating to each sub-head of estimate they should in the case of work the amounts which are kept by sub-heads be totalled and the total recorded in column 10 for posting the work abstract.

(Continued.....)

*II-Account of "Secured" advanced allowed on the security of materials brought to site*

[illegible]

\*Entries relating to each description of materials should be posted thus in column 3. First enter the difference between the quantities in columns 1 and 2, then show below the entry the quantities, if any, brought to site against which a further advance has been authorised this entry being prefixed by the *plus* sign. Finally strike the total of the two entries, which will represent the total quantity outstanding.

† Entries in column 8 show the money, values of the total quantities outstanding as per column 3.

<sup>1</sup> Full rate assessed by the Divisional Officer

Reduced rate which advance is made

### Description of materials

† Up to date amount of advance

### \* Temporary Advance accounts:-

When a disbursing officer makes a remittance to a subordinate officer to enable him to make a number of specific petty payment on a muster roll or other vouchers which has already been passed for payment, the amount remitted should be treated as a temporary advance. Such accounts should be closed as soon as possible.

\* Cash book:- All the transactions relating to the actual receipt and payment of cash are recorded in the book known as "cash book". It is the most important record which is maintained daily in the S.D.O and divisional office. The cash book contains two money columns headed "cash" and "Bank or Treasury".

Every entry into the cash book shall be concise. The date, number of voucher, name of work and brief narration is unmistakably indicated.

### \* Suspense account:-

It is an account in the records of an organisation in which items are temporarily entered before the allocation to the correct and final account.

Receipt side Payment side

**Payment side**

[illegible]

\* Book transfer:-

It is the transfer of funds or asset ownership from one account to another in the same financial institution.

\* "Voucher" is a small printed piece of paper that entitles the holder for an accounting representing an internal intent to make payment. It may be considered as transaction type of monetary value.

\* Measurement Book:-

Payments for all work done which is susceptible of measurement and for all supplies are made on the basis of measurement recorded in measurement books.

The measurement books available with the department are machine numbered serially and a register is maintained in the prescribed form showing the serial number of each book, the name of the sub-division to which issued, date of issue, date of return etc.

**Measurement Book**

S.No.	Particulars	Details of Actual Mesurement				Contents or Area
		No.	L.	B.	H or D	

### \* Daily Labour or Muster Roll System:-

When the work is carried out by the department directly by employing the daily labour such as masons, beldar, carpenters, coolies, blacksmiths, plumber etc, it is known as Daily labour or muster Roll system.

All the material required for the construction are issued from stores or purchased directly chargeable to the concerned work.

The attendance of the Labourers is maintained in a muster roll in Form 21. Periodic inspection by the higher authority is done in order to check the actual number of labour working.

On the basis of muster roll payment is made to the labour.

Muster roll should never be made in duplicate and the entries made is such that it cannot be interpolated or altered.

Labourers are paid in weekly, fortnightly or monthly format by referring to the muster roll.

### \* Acquittance Roll:-

It is a receipt in evidence of payment in a prescribed form having columns such as item number, name, designation, Net Income etc.

This kind of document is necessary to maintain all accounts and registers including pay bill registers.

It is also helpful while preparing budget estimates for future works as well as to revise the estimates or amount incurred during transaction.

### Stores:-

It means that all articles and materials purchased or acquired for the use of government. It includes issuable items, dead stock of nature of plants, machinery, instruments, equipments, fixtures etc.

The stores are classified into the following categories:-

- (i) General store
- (ii) Tools & Plant
- (iii) Road metal
- (iv) Materials used direct to work.

### \* Receipt of stores :-

Materials may be received on the stock from the following sources:-

- (i) Supplier
- (ii) Other sub-divisions, departments
- (iii) Manufacture
- (iv) Work & building.

In all the cases, there should be proper authority for the receipt by the store keeper or the concerned officer of materials to be brought on stock.

### Issue of material from stock :-

Materials from stock may issued for:-

- (i) Use on works either by issue to contractor or direct.
- (ii) Despatch to other sub-division
- (iii) Sale to contractor, employee, other person.
